

Damir Khaibulin

Fullstack-Developer (Laravel/Symfony/Vue)

Location: Batumi. Georgia

Birthday: 11.04.2001

Work Expirience: 4+ years

About me

Experienced PHP Developer with over 4 years of commercial experience in creating and maintaining high-load web applications and APIs. Specializes in backend development using modern frameworks Laravel and Symfony, possessing deep knowledge in performance optimization, caching (Redis, Memcached), and working with relational databases (PostgreSQL, MySQL).

Has a successful track record in fullstack development, including creating admin panels (Filament, Sonata Admin, Voyager) and integrating with third-party services. Takes a responsible approach to refactoring legacy code and optimizing database

queries.

Aimed at participating in complex projects where I can apply and enhance my technical skills while working in a team of professionals.

Skills

Backend	Frontend
PHP, Symfony, Laravel, Filament, Sonata, Voyager, Rabbit MQ, Elastic Search, Redis, Memcached, PHPUnit, RESTfull API	HTML, CSS, JavaScript, Vue.js, Bootstrap, Tailwind, Jquery Ajax
Databases	Libraries & Tools
MySQL, PostgreSQL	Laravel Excel, Spatie Laravel Sitemap, Symfony DOM Crawler, Google Maps API, Guzzle HTTP, elasticsearch/elasticsearch, Laravel Passport, Laravel Sanctum, php-amqplib/php-amqplib, predis/predis
OS	DevOps
Linux Ubuntu, Windows	Docker, AWS, Git

Work Experience

Backend Developer (Symfony/PHP) | «Программный продукт» (Remote) | June 2024 — September 2025, 1 year 4 month

- Worked on government projects in the social sector and high-load applications. **Performed large-scale refactoring of legacy code, which accelerated the response time of key API endpoints by 40%.** Optimized complex database queries, reducing their average execution time from 800 ms to 90 ms. Implemented a multi-level caching system using Redis and Memcached. **Participated in cybersecurity efforts, eliminating several critical vulnerabilities (SQL injection, XSS), which enhanced project security.**
- **Technology Stack:** PHP 8+, Symfony 6, Sonata Admin, Redis, Memcached, PostgreSQL, Rabbit MQ, Elastic search

FullStack Developer (PHP, JS, Laravel) | «Roso» (Remote) | December 2021 — June 2024, 2 years 7 months

- **End-to-end development of websites from scratch:** from technical specifications and architecture to launch and support. Created high-load and complex services, including corporate portals, SaaS platforms, and online stores. **To improve performance and fault tolerance of key projects, implemented and configured advanced tools: used Rabbit MQ for asynchronous processing of background tasks (sending emails, notifications), Elasticsearch for implementing full-text search and aggregating large data sets, and Redis for caching.** This significantly accelerated service performance and handled increasing load.
- **Technology Stack:** PHP, Laravel, Vue.js, MySQL/PostgreSQL, Redis, Filament

Freelance Fullstack Developer (PHP/Laravel/Symfony/Vue) | Self-employed (Remote) | March 2023 – January 2026, 2 year 10 months

- Successfully delivered over 15 projects for international clients, ranging from MVP development to scaling existing platforms. Specialized in rapid prototyping and iterative development, allowing clients to test business hypotheses with minimal initial investment. Implemented clean architecture and modular code practices to ensure easy scalability and long-term maintainability.
- Developed and optimized RESTful APIs for mobile and web applications, integrating with third-party services such as payment gateways, geolocation services, and social media platforms. Actively collaborated with clients on requirements refinement and Agile-based project management, ensuring transparent communication and timely delivery.
- **Technology Stack:** PHP, Laravel, Symfony, Vue.js, MySQL, PostgreSQL, Redis, Docker, Bootstrap, Tailwind, REST API

Key Projects

Medication and Pharmacy Search Service — Pill in Trip (pillintrip.com)

Web platform and parsing microservice for travelers

- **Challenge:** Develop a service for real-time search of medication equivalents and on-duty pharmacy data worldwide.
- **Solution & My Role (Fullstack Developer):**
 - Designed and built a **high-load Laravel microservice** for real-time parsing of on-duty pharmacy data.
 - Used **Symfony DOM Crawler** to extract data from diverse sources (pharmacy websites, official portals).
 - Integrated **Google Maps API** for address geocoding and location visualization.
 - Developed a **RESTful API** to provide data to other platform services.
 - Built an **admin panel with Filament PHP** for data management and parser monitoring.
- **Outcome:** The service solves a critical real-world problem—helping people in unfamiliar countries quickly find necessary medication or the nearest open pharmacy.

Technologies: Laravel, Filament PHP, Symfony DOM Crawler, Google Maps API, REST API, MySQL.

Comprehensive Development of Multi-Service Platform — GORA.MARKET

Marketplace expansion with goods, real estate, and financial services

- **Challenge:** Significantly expand platform functionality by adding new business verticals and improving user experience.
- **Solution & My Role (Fullstack Developer):**
 - **Developed from scratch** full-fledged **banking and leasing service sections** (frontend + backend).
 - Created a **job vacancies module** with a dedicated frontend, launching an HR direction for the platform.
 - Enhanced security by implementing **two-factor authentication (2FA)**.
 - Automated processes via **SMS/email service integrations, geocoding, and auto-filling vehicle details using VIN**.
 - Performed **deep SQL query optimization** and fully updated **OpenAPI documentation**.
 - Improved logic and functionality of **User and Organization Personal Accounts**.
- **Outcome:** The platform became more versatile, secure, and user-friendly for buyers, sellers, financial partners, and employers.

Technologies: Laravel, Vue.js, MySQL, REST API, OpenAPI/Swagger.

Digital Ecosystem Development for Major Real Estate Developer (TEN Development Group)

Backend development for a large-scale real estate project

- **Challenge:** Contribute to building a high-load digital platform by solving complex business problems.
- **Solution & My Role (Backend Developer):**
 - Enhanced and extended **integration with Macro CRM**, automating sales funnel processes and real-time data synchronization.
 - Developed **data feeds for automatic listing publications** on major aggregators, increasing audience reach and reducing manual effort.
 - Built new features and sections for various residential complexes.
 - Conducted **comprehensive optimization of PHP code and SQL queries (PostgreSQL)**, significantly improving API response times and catalog performance with thousands of listings.
 - Ensured performance and asynchronous task handling using **Redis and RabbitMQ**.
- **Outcome:** Contributed substantially to creating a high-performance, functional platform for a market-leading real estate developer.

Technologies: Symfony, PostgreSQL, Elasticsearch, RabbitMQ, Redis, REST API.

Internal CRM System for Freelancer

Custom solution for time tracking, project, and finance management

- **Challenge:** Create an ideal tool for freelance workflow management, as off-the-shelf solutions lacked flexibility and required features.
- **Solution & My Role (Fullstack Developer):**
 - Independently designed and developed a **personalized CRM system from scratch**.
 - Implemented key modules: **time tracker**, client and project management, and basic financial analytics.
 - Focused on simplicity, accuracy, and full data control.
- **Outcome:** Gained an efficient tool that automated administrative routines and allowed focusing on client work and development.

Technologies: Laravel, Vue.js/Blade, MySQL.

Education

- **Ufa Fuel and Energy College (UTEC) | September 2019 – June 2021**
